

Keeping the World Flowing
for Future Generations

The RC-DOS actuator is built on the well-known and highly reliable scotch-yoke principle.

It is designed for 3-position control of dosing valves or emergency shut-down (ESD) valves where a partial stroke test (PST) is demanded.

The RC-DOS actuator is a basic Remote Control RC200-SR actuator equipped with an integrated linear cylinder with fully adjustable stroke length.

The actuator is operated by a 3/2-way solenoid valve similar to any other single acting pneumatic actuator in an isolating (on-off) application.

Additionally the user can stop actuator travel in any suitable intermediate position, by using a second 3/2-way solenoid valve connected to the integrated linear cylinder.

The dosing / PST function is designed only for travel from the fully compressed spring position to an intermediate position. Travel can then continue to either of the end positions.

The intermediate position can be used in dosing applications during a filling cycle or a partial stroke test position for ESD applications.

Features:

- Single-acting actuator with spring-return for guaranteed failsafe operation
- Fully adjustable mechanic travel stop for accurate partial stroke test angle
- Cost effective and simple control using only two 3/2-way solenoid valves
- Adjustable dosing position from 0 to 90°
- Exact filling of products over a given scale
- Mounting flange as per DIN 3337 / ISO 5211
- Up to 660 Nm closing torque at 6 bar
- Compatible with any VDI / VDE 3845 suitable limit switches

Method of operation

Control the actuator with two 3/2-way NC solenoid valves:

- Solenoid valve 1 connected to port 1
- Solenoid valve 2 connected to ports 2 & 3

RC200-DOS

3-position actuator with spring-return
for dosing and partial stroke test operation

Normal on-off operation

Port 1 pressurised & ports 2 & 3 vented = actuator travels to active end position, open or closed.

Dosing/PST operation

Ports 1, 2 & 3 pressurised = actuator travels to the set intermediate position.

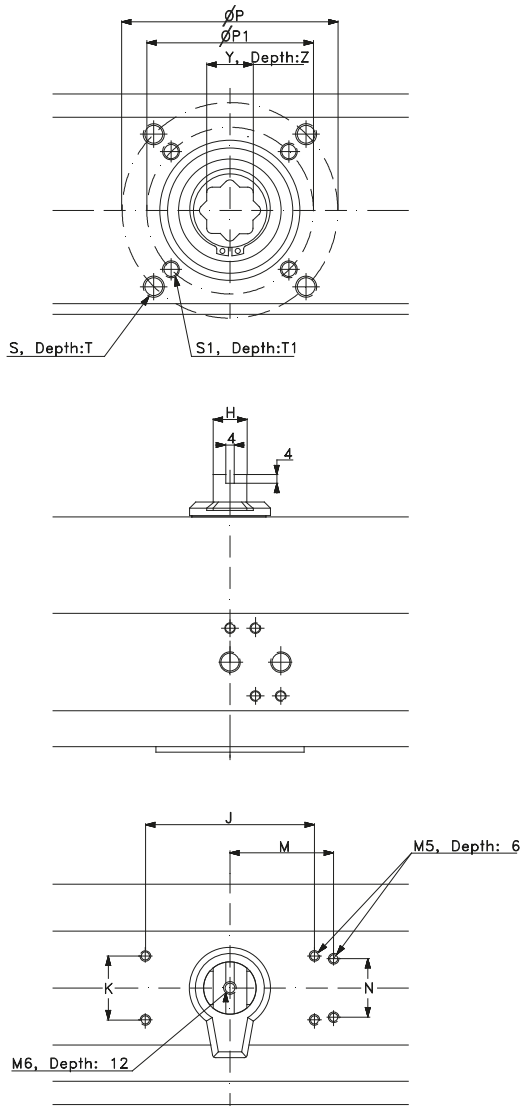

Fail position

All ports vented = spring-return travels to fail position, open or closed.

3-position actuator with spring-return
for dosing and PST operation

RC270

RC210-250

Air connections

RC210-230 3 x R $\frac{1}{8}$ " , Depth 8
RC250-270 3 x R $\frac{1}{4}$ " , Depth 12

Torque in Nm (Air pressure 0.55 Mpa / 6 bar)

Type	ISO5211 DIN3337	Air Opens	Spring closes and closing		
			90°	30°	0°
RC210-DOS	F05	58	17.5	4.5	11.5
